Project Work

Decentralized Social Media Website:

This allows user to post and tip each other using Ethereum blockchain. The project was developed because of privacy concerns in the current centralized social media system. It used technologies such as ReactJS for frontend and solidity for developing smart contracts.

Bad Snake Understanding And Improving Python Package Index Malware Scanning:

The research emphasize the vulnerability of open source repositories like PyPI to attack the malware. To protect open-source software. And this emphasize the need of improving detection and strengthening collaboration between security research.

Smart Medical Prescription Service:

Development of a cloud based management system. And this is both useful to the doctor and patients. This system is website based platform with MYSQL database system. The records of the patients are store in a data base with a unique code .

Research Paper

Research about the working of social medias and how companies use it to gain information about individuals and sell their data for profit. And proposed a solution of a decentralized system which was published to International Journal of Innovative Research in Computer and Communication Engineering (IJIRCCE) Volume 12 , Issue 5 , May 2024 by the title "Decentralized Social Media Using Ethereum Blockchain and Solidity Smart Contract"
