PROFESSIONAL SUMMARY

Recent Computer Science graduate (2024) with a strong foundation in programming fundamentals and an interest in full-stack web development. Built academic projects across web, database, and security research, and co-authored a published paper. Comfortable with C, C++, Python, Java, JavaScript, and SQL, with hands-on experience in React and Solidity. Quick learner who enjoys picking up new tools. Seeking an entry-level developer role to contribute and grow into a well-rounded engineer.

TECHNICAL SKILLS

Languages: C, C++, Python, Java, JavaScript, SQL, Solidity

Web Development: HTML, CSS, ReactJS, MySQL, Database Design

Tools & Practices: Git, Ethical Hacking, Malware Analysis, Supply Chain Security Research

Relevant Coursework: Object Oriented Programming, Data Structures & Algorithms, Advanced DSA, Databases, Operating Systems, Computer Networks, Machine Learning, Information Retrieval, Image Processing

PROJECTS

Decentralized Social Media Website

ReactJS, Solidity, Ethereum Blockchain | [GitHub](#)

- Blockchain-based social platform where users post content and tip each other directly using Ethereum, eliminating centralised data intermediaries that monetise user data
- Authored Solidity smart contracts handling on-chain post storage and peer-to-peer tipping without relying on a central authority
- Built the ReactJS frontend with wallet integration, enabling verifiable content ownership on the Ethereum network
- Project formed the basis of a peer-reviewed publication in IJIRCCE (May 2024)

Smart Medical Prescription Service

Web Platform, MySQL, Cloud | [GitHub](#)

- Cloud-based prescription management system bridging doctors and patients through a web interface accessible from any browser
- Designed a MySQL database schema with unique patient codes for organised, retrievable prescription records
- Implemented role-based access for clinicians and patients to streamline prescription workflows

Bad Snake — PyPI Malware Scanning Research

Python, Security Research, Supply Chain Analysis

- Investigated the vulnerability of open-source package repositories like PyPI to malware injection attacks
- Catalogued common attack vectors against package indexes and analysed detection gaps in existing pipelines
- Prototyped detection improvements for malicious Python packages and advocated stronger collaboration between security researchers and maintainers

RESEARCH PUBLICATION

Decentralized Social Media Using Ethereum Blockchain and Solidity Smart Contract

International Journal of Innovative Research in Computer and Communication Engineering (IJIRCCE) | Volume 12, Issue 5 | May 2024

Investigated how centralised social media companies harvest and monetise personal data, proposing a decentralised alternative on the Ethereum blockchain. The system uses Solidity smart contracts for content ownership and tipping without a central authority, giving users verifiable control over their data. [Published Paper](#)

EDUCATION

B.Tech in Computer Science and Engineering

Prist College of Engineering, Kerala | 2020 — 2024

Higher Secondary Education

Board of Higher Secondary Examination, Kerala | 2019 — 2020

SSLC (Secondary School Leaving Certificate)

Board of Public Examinations, Kerala | 2018
